Mathematics – STEM Project “Healthy Lifestyles” (15%)

Cohort Comment

This Mathematics task was part of the Year 8 STEM Project “Healthy Lifestyles”.

The students were required to present an infographic to promote an aspect of human health. They researched relevant statistical information about a health issue, then communicated the information using clear language, graphs and diagrams to meet the needs of a particular target audience.

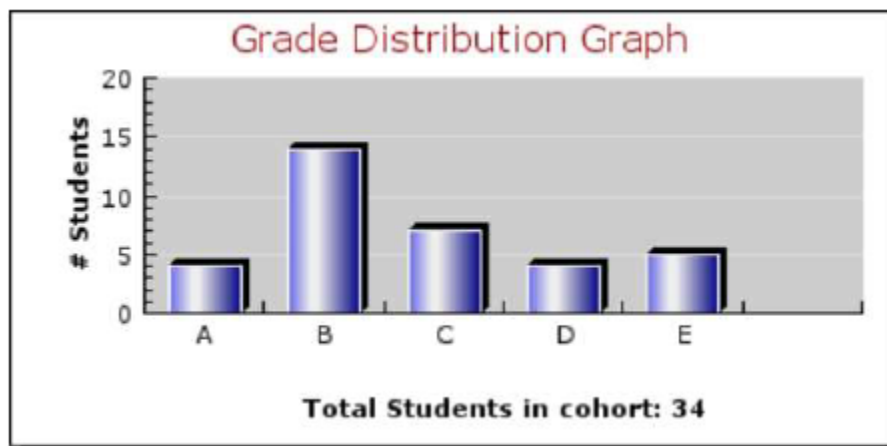

For this component of the STEM project, students were assessed on their understanding of statistical information, and its accurate communication. The students’ understanding of human health, and their graphical design skills, were assessed separately by the Science and Technology (Mandatory) components of the project.

Each student has received individual feedback on their work and the marking guideline. Please refer to this feedback when making revised learning goals.

[Detailed description of marking guideline/ grade statements](#)

Score: B

Mark: 34.00/40.00

Student Reflection

I need to ensure I have details to either support or refute each point. This will mean some further research if I’m missing something.

Student Confirmation

The mark/grade recorded on this progressive report is the same as the mark stated on the assessment task
